进化星球面临的挑战

www.evolution.land

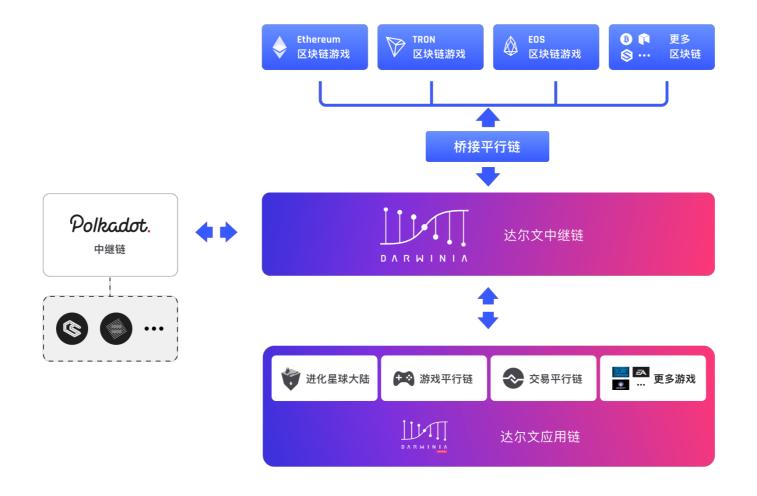

- 用户体验问题
 - 助记词备份与安全保存
- 交易确认和反馈慢
- 付费习惯挑战
- 开发成本高,治理升级难

Darwinia Network

- 为游戏开发者提供
 - 可扩展性
 - 跨链互操作性
 - NFT可识别性
 - 随机数服务
 - 基于Substrate的游戏应用链SDK
- 与Polkadot无缝集成
- 桥接至主流公链(ETH/TRON/EOS, more are coming)
- 将使用游戏应用链SDK开发下一个进化星球大陆,并连接至达尔文网络

架构设计

基于Substrate技术,可连接至Polkadot网络

Commitment POS

- 权益工作量证明两种计算口径
 - 未来承诺持有这个代币多长时间

• 过去持有这个代币多长时间(币龄)

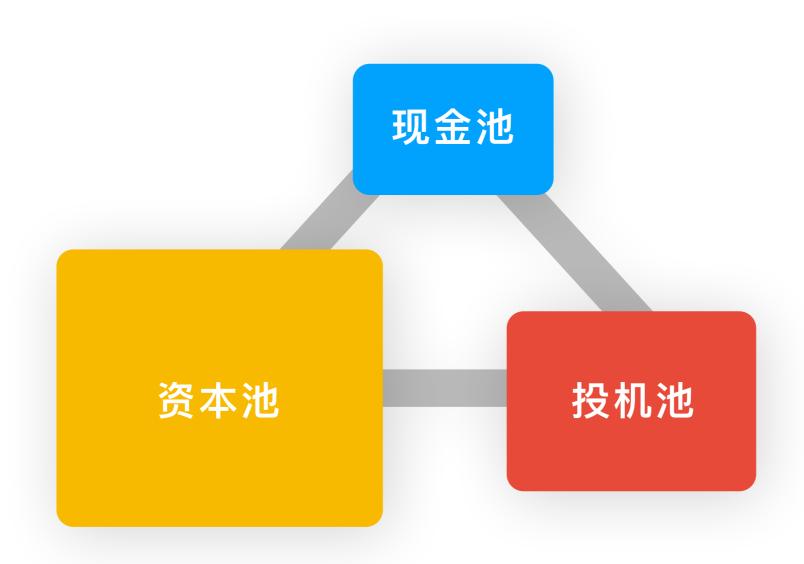

双通证设计

- RING是基础通证,作为支付通证和燃料通证
- RING还可以锁定生成KTON

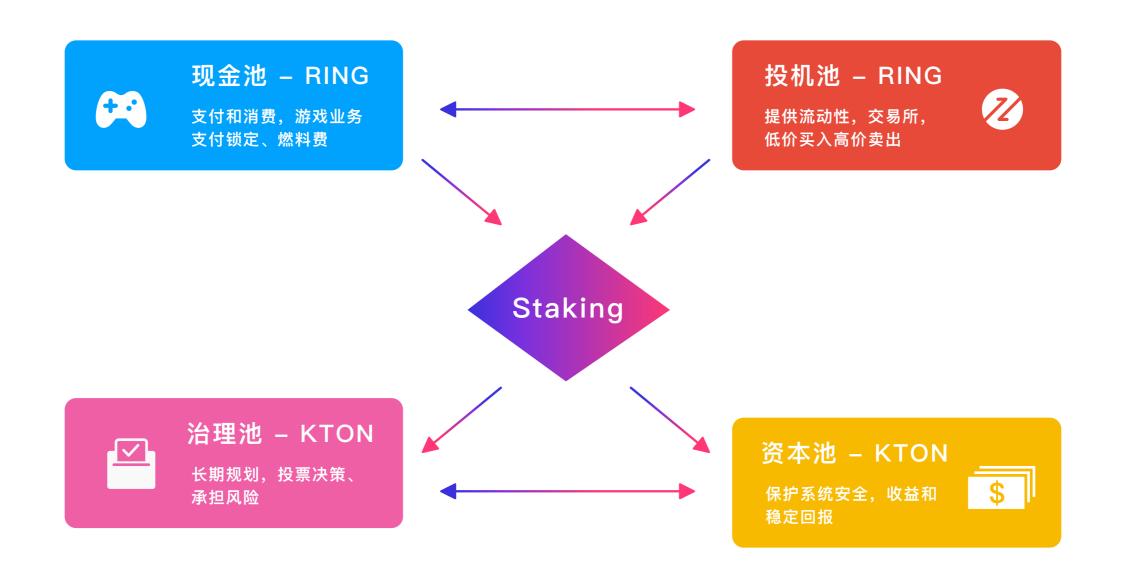

KTON = Lock_RING × Commit_Time

- KTON作为权益证明通证,基于Commitment POS,只能通过锁定 RING获得
- KTON持有者可以参与治理投票或通过Staking获得RING收益保护系统安全

经典三池模型

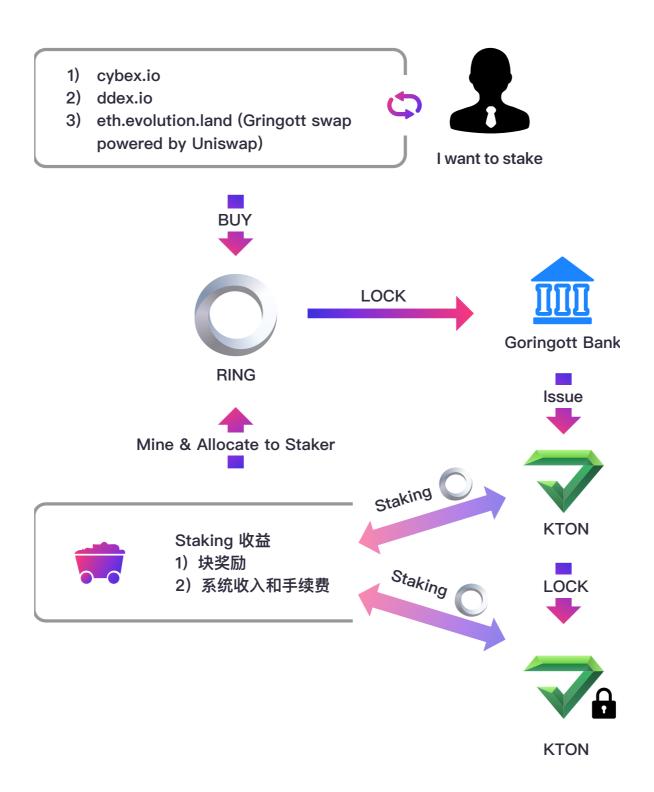

四池模型

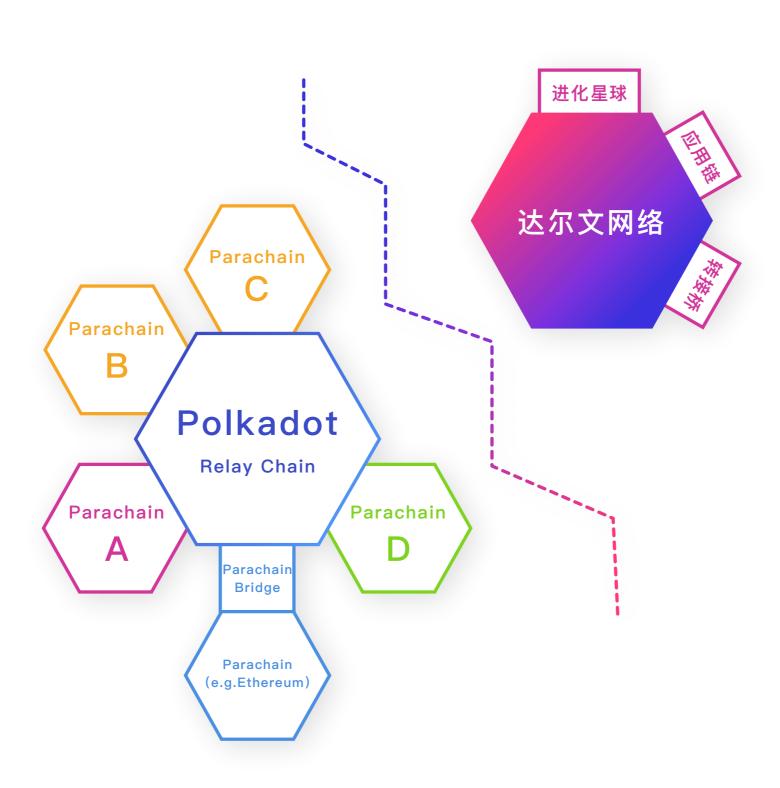

• RING可以承诺锁定1-36月获得不同KTON数量,按月复利计算以鼓励长期承诺投入

如何Staking

SOLO模式

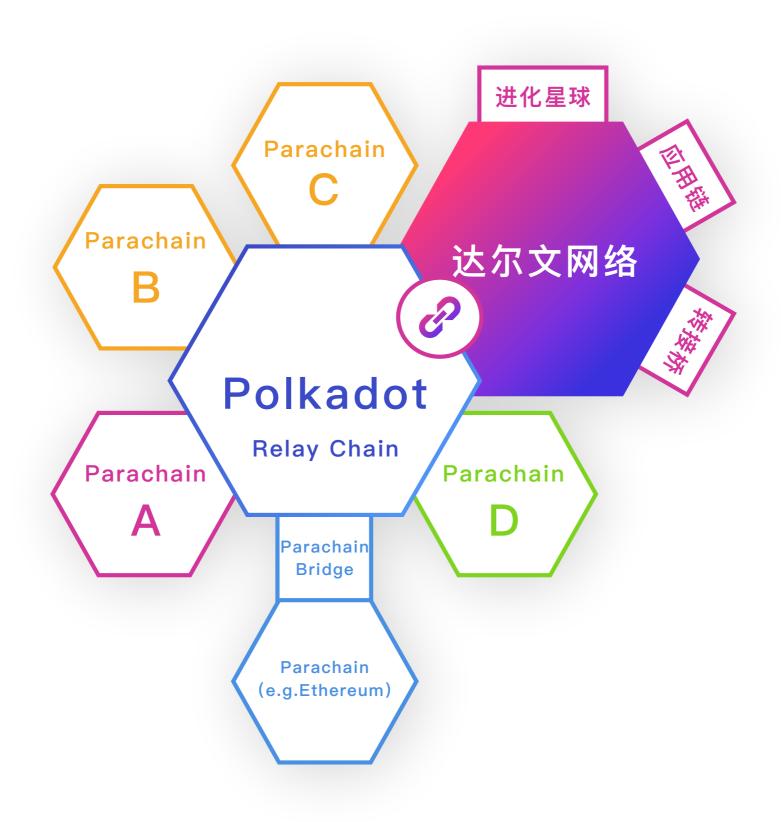

Solo模式收益分配

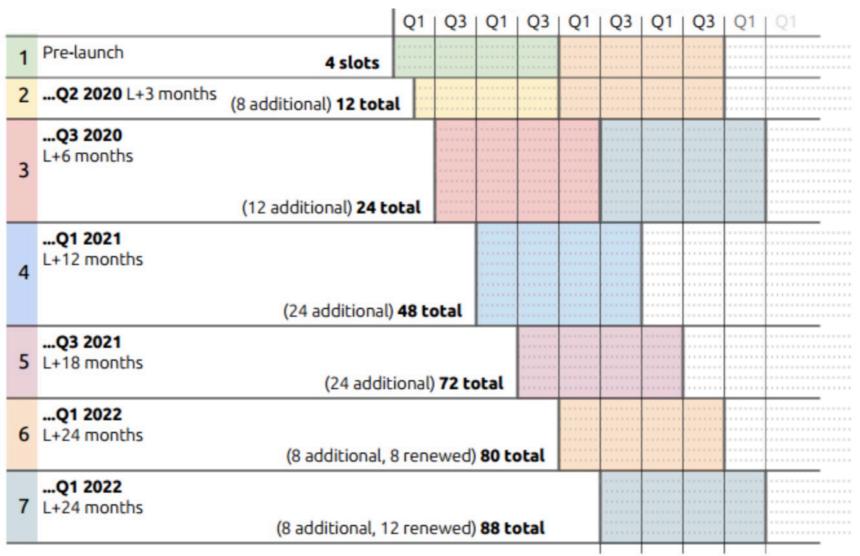

备注: X, Y为系统治理参数,满足X+Y <= 100。X%,Y%和 (100-X-Y)% 的意义分别表示分配给验证人(含Nominator),氪石持有者,Treasury的奖励比例。

Polkadot连接模式

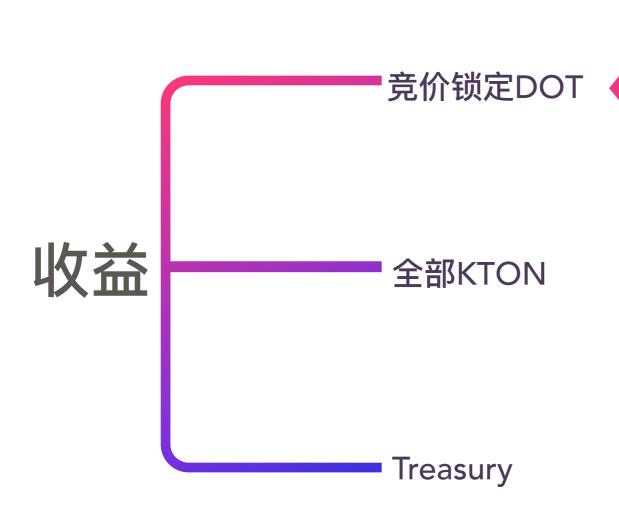

Polkadot Parachain auction schedule

Polkadot Parachain Allocation

使用Staking收益来激励DOT持有者帮助Bid Parachain Slot

Polkadot连接模式收益分配

众筹锁定竞价

- · 创建抽象众筹合约参与Parachain Slot竞价,任何人可以通过锁定DOT帮助竞价
- · DOT持有者锁定DOT至抽象账户
- 抽象账户参与Parachain Bid成功
- · 切换至Polkadot连接模式后,Slot期间,抽象账户中的竞价锁定DOT持有者按比例获得 Staking收益
- · (块奖励上限 + NETWORK_FEE) × X%

RoadMap

- Darwinia PoC1 Trilobita Testnet (2019-07-03 已上线)
 - Token economic and staking features
 - For developers and validators to get started and learn the system
- Darwinia PoC1 Final Testnet (2019-07-16)
 - Web Wallet
 - Stable Solo model version for users/nominators
- Darwinia PoC2 (2019-08-16)
 - Darwinia blockchain explorer
 - Testing token faucet
- Darwinia Release Candidate (2019-09-30)
 - NTF identifiability support by cross-chain NFT Token ID coding system
 - Bridges to Ethereum and TRON
- Darwinia Mainet(2019 Q4)
 - · Security Reviewing and checking
 - Polkadot Connect Model features

Thanks!
